

## Features

- Supports KWP2000, ISO 9141 K-Line, L-line and CAN
- User friendly Customizable GUI and DTC table
- Integrated user management and monitor system
- More supported ECU's and functions on request
- Data synchronization with back office through internet
- Supports standards like XML/ASAM standards

## Logena Service Tool

The Logena Service Tool is a powerful PC tool for vehicle diagnostics on the Continental KIBES32 multiplex system and other vehicle systems

By connecting the vehicle through a USB or WIFI K-Line & CAN Interface the tool will read/clear DTC's, download software/parameters, monitor and display the system I/O or provide parameter change capability for several vehicle ECU's.

This multi-language Service Tool can be used in the R&D, End Of Line (EOL) or Service area.
