- 8 analog inputs
- 15 digital inputs, threshold configurable via software
- And more...

Multifunctional Automotive Touchscreen Display

The Multifunctional Automotive Touchscreen Display allows its user to monitor different signals from the vehicle through one specially designed display. Of course, Logena is perfectly able to act as an integration partner.

The M.A.T.D can be integrated in different kinds of commercial vehicles, such as buses, garbage- and fire trucks.

Furthermore, this display can be used in different environmental surroundings as well, which means that it is water- and heat resistant.
